(Note)

Thanks for choosing our products. Please read the user manual carefully so as to use this device correctly. After you finish reading, please keep it properly for future reference.

The product complies with standard safety regulations. Incorrect operations may cause fire or electric shock. Please strictly follow the operation steps for device installation and repair.

Beware of high voltage in the device, do not open the chassis.

Do not touch the output terminals marked with “” when the device is working.

10cm

Keep good cooling. The ventilations must not be covered or blocked by any objects like newspaper, rags or curtains. For rack installation, make sure there is at least 10cm space away from the ventilations.

Do not insert any metal parts or inflammable objects to the device due to high risk of electric or fire.

Do not expose the device to rain and do not touch the device when it is hot.

Please contact local dealer or professional technicians when repair work is needed.

(AC 220V/50Hz)
Make sure the local grid voltage conforms to the rated power showed on the back panel of the device (AC 220V/50Hz) when connecting the device to the power supply. And also, make sure the socket and power cable is not damaged or broken.

This equipment should be connected to power socket with ground protection.
